

Screen-Guard Medium Pet Door Installation Instructions

Tools Required for Installation

Safety Goggles • Tape Measure • Felt-Tip Marker • Level • Side Cut Pliers or Tin Snips
Utility Knife • Phillips Screwdriver or Electric Screw Driver with Phillips Bit

1. Measure the distance from floor to your pet's shoulder and add 2". Transfer this measurement to screen guard on screen door and mark with the felt tipped marker.
2. Place level on mark and center the bubble. Next, with the felt tipped marker, make a line along the top of the level onto the screen guard.
3. Align top of template to this line and allow at least 2" from side and bottom of template to edges of screen guard. Tape template securely in place.
4. Remove the screen door from track and place on clean garage floor with screen guard side up.
5. Using side cut pliers or tin snips, carefully cut screen guard following the inside edge of template. Remove cut screen guard section and template and discard. Turn entire screen door over with screen guard side down.
6. With a sharp utility knife, carefully cut fly screen material following the cut out in the screen guard as a guide. Remove cut fly screen section and discard.
7. Place the plastic frame under screen door and screen guard with screw holes facing up. Line up frame opening with cutout.
8. Next, peel off tape covering all around the inside aluminum frame and place the frame, tape side down, into the cutout, lining up the plastic outside frame with the aluminum inside frame.
9. Place the eight (8) screws (supplied) into the eight (8) pre-dilled holes in the aluminum frame and attach securely. Do not over-tighten.
10. Lift entire screen door off floor and replace into screen door track. Your new Screen-Guard Pet Door is now ready for use.
A self-locking slide is also included if you wish to restrict pet access in or out.

As with any home improvement project, if you do not have the tools or skills to properly install your pet door, we suggest using a professional handyman or licensed contractor.
